The Seaport of Brake

Brake is an important location for grain and animal feed. In Germany, the port has a leading position for agricultural products and the import of cellulose. Large competence for the management of wind power plants and project cargo, fuels steady growth in the import and export sector.

Multi-Functional Terminals straight on the River

Brake is a functional port with a large amount of bulk cargo handling abilities. The port offers solid connections to inland rail, road and waterway. As a result, the port is well-equipped to handle a large number of goods, including iron and other bulk items, which are handled in the port.
